Due to rain, the pavement preservation projects have been rescheduled to begin on Tuesday June 16, 2020 and continue through Thursday June 18, 2020.

These chip seal projects will require short duration road closures between 7:00 a.m. and 5:00 p.m. at each location on the date the work is scheduled to take place. Detours will be in place during work hours.

Work scheduled for Tuesday June 16, 2020:

CHIP SEAL - Is the application of a special protective wearing surface to an existing pavement. A thin layer of liquid asphalt is sprayed down in front of the chip spreader by a distributor. A dump truck full of chips (crushed rock) locks onto a chip spreader which is pulled backwards. The chips spread over the liquid asphalt are then compacted by rollers.

Chip seal projects may require a total lane closure for a day or part of the day. Equipment is slow moving and must cover the same area multiple times. Once the crew has left the work area, the rock is left on the road surface for seven to ten days so that vehicle traffic can continue to lock the rock into the liquid asphalt. Excess chips are then removed by sweepers to be reused on the next chip seal project.
Work scheduled for Thursday June 18, 2020:

This road work is expected to extend the service life of the pavement structure.

Please proceed with caution in these areas during construction times and observe all temporary traffic control devices. Thank you for your assistance during this work.
